

# Cockroach Treatment

## LOW PREPARATION RESIDENT CHECKLIST

Our low-preparation cockroach service uses bait, dust, and insect monitors. Kitchen and bathroom cupboards do not need to be emptied unless your technician provides different instructions.

### Prep Checklist

- 🐛 Remove all items stored on top of the refrigerator. The refrigerator must be free to move so the technician can pull it out and inspect the motor and surrounding area.
- 🐛 Clear the top of the stove and oven to allow inspection of the appliance and surrounding areas.
- 🐛 Keep kitchen counters uncluttered to allow inspection and treatment.
- 🐛 Wash dishes, clean up food spills and crumbs, keep food in sealed containers, and remove trash regularly.
- 🐛 Do not apply store-bought sprays, foggers, powders, or other pest-control products before or after service, as they can interfere with the treatment.
- 🐛 Keep children and pets away from treatment areas during service.

### Reminders Before & After The Treatment

- 🐛 DO NOT self-treat before or after the service.
- 🐛 DO NOT use other pest control chemicals (powders or sprays) or cleaning products near areas that have been treated, as this will decrease the effectiveness of the treatments.
- 🐛 Do not move, remove, or tamper with insect monitors, bait placements, or other treatment materials placed by the technician.
- 🐛 Continue good sanitation practices, including keeping food sealed, removing spills and crumbs, and using a tight-fitting lid on trash containers.
- 🐛 Report water leaks or plumbing issues, as moisture can support cockroach activity.
- 🐛 When cockroach activity or evidence is found, A&A Pest Control will schedule a follow-up approximately 2 weeks later. If none is found, a follow-up is only needed when circumstances warrant another inspection, such as areas that could not be inspected or a property manager's request.
- 🐛 Please be patient. With proper preparation and good sanitation practices, the treatment will reduce cockroach activity levels within approximately 2-4 weeks.
